CRISIS CURRENCY TOKEN

Create Profit on Global Crisis

ABSTRACT

CCTOK – CRISIS CURRENCY TOKEN

The CCTOK – Crisis Currency Token is the world's first digital crypto-crisis currency. By linking the Global Crisis Index (GCI) to the CCTOK, global crises can be transformed into economic profit. The CCTOK rises in price when global crises intensify. Holders of CCTOK want to speculate on an increase in global crises to generate financial profits.

Creating profit on global crisis.

INCREASE IN GLOBAL CRISES

At no time has the number of global crises been higher, more complex, and threatening. Climate change and ecological disasters are destroying habitats and threatening the existence of our planet. Economic and currency crises exacerbate social imbalances and increase global poverty. Due to high population growth, more and more people are fighting for increasingly scarce living space, resources, and raw materials. All of this leads to an intensification and increase in social conflicts, wars, and migration. The various crises are also exacerbating each other and setting a ruinous downward spiral in motion. The CCTOK picks up on these developments and makes them economically profitable for the token owners.

GCI — GLOBAL CRISIS INDEX

Many renowned institutions and scientists are studying the development of the various global risks and delivering remarkable results. With the Global Crisis Index, a statistical regression model has been developed that considers many different indicators and sources and condenses them into an overall risk indicator. The Global Crisis Index is the world's first indicator for the development of major global crises: Climate change, population growth, economic crises, wars, migration, and resource scarcity. It is a reliable trend indicator for the development of the global crisis. It can also identify the share of each individual risk category.

GLOBAL CRISES

ECONOMIC AND POLITICAL CRISES

Many countries suffer from high national debt, bloated state apparatuses, and a weakening economy. The risk of economic crises with pronounced recessions is always high and latent. In addition, there is an ever greater loss of confidence in the FIAT monetary system and the threat of currency crises with inflationary or deflationary developments. These developments are accompanied by a massive loss of confidence in politics and helpless governments.

CLIMATE CHANGE

Climate change is rapidly destroying the basis of existence and livelihood of the entire human race. The effects are already visible in many world regions and can be quantitatively proven by science. In many regions of the world, climate change and drought are already leading to a lack of fertile habitat and making it impossible for people to survive.

MIGRATION

Global migration movements are being exacerbated by economic imbalances and ecological disasters, and the pressure to migrate to countries and continents with better living conditions is rapidly increasing. Social problems increase in the countries of immigration, and only the weakest remain in the countries of emigration. Ultimately, migration expresses increasing distribution and displacement struggles for living space, resources, and capital.

GLOBAL CRISES

POPULATION GROWTH

Population growth is increasing enormously. Since 1800 (1 billion), the world's population has increased more than eightfold by 2022 (8 billion). An increase to up to 12 billion people by 2100 is considered likely. The massive population growth leads to increased demand for resources and living space. More and more people are fighting for dwindling living space and resources.

SCARCITY OF RAW MATERIALS AND RESOURCES

Natural and non-renewable raw materials are consumed irretrievably daily. Due to the growth of the world's population and increasing industrial production, the consumption of raw materials continues to rise. The demand for raw materials will continue to rise until natural reserves are completely exhausted. This results in increasing wars over the remaining raw materials and resources.

SOCIAL CONFLICTS, WAR, AND TERRORISM

The various threats reinforce each other and lead to a ruinous downward spiral. There is a high probability that large parts of the world will no longer be habitable while the world's population continues to grow massively. This, in turn, will lead to increased migration to those parts of the world where survival is still possible, exacerbating social conflicts and ecological emergencies. All these developments ultimately lead to a drastic increase in social conflicts, wars, and terrorism.

CRISIS CURRENCY TOKEN

CREATING PROFIT FROM GLOBAL CRISIS.

The **CCTOK – Crisis Currency Token** is the world's first digital cryptocurrency, whose price rises with increasing crises, and thus, profits can be made from crises. Holders of CCTOK can speculate on the increase in global risks and profit from price increases.

The **CCTOK** has a function for hedging against global threats. The **CCTOK** is suitable for those who are convinced that global crises will worsen and want to profit economically from this.

Linking the GCI and CCTOK: While the Global Crisis Index identifies developments in global risks and makes them assessable, the CCTOK makes these risks tradable via crypto exchanges and thus convertible into profit.

CRISIS CURRENCIES

Crisis currencies increase in value in times of crisis. The best-known crisis currencies are probably gold and Bitcoin. However, both were not originally conceived as crisis currencies but have gained the trust of people and markets as crisis currencies. CCTOK sees itself as a promising addition and opportunity for diversification in the crisis currency portfolio. Only CCTOK was conceived as a pure crisis currency and positioned as such on the market. Gold and Bitcoin are already at a very high price level, whereas CCTOK still has enormous upside potential (early bird effect).

CCTOK PRICE APPRECIATION POTENTIAL

CCTOK will be continuously and sustainably positioned on the market as a digital cryptocurrency in crisis. This will build trust in the token and its management. The primary goal is to achieve high price appreciation over a long period.

The main influencing factors and instruments for price appreciation

The Global Crisis Index, as a statistical regression model, provides a well-founded indicator function for assessing the development of the global crisis.

Reinvestment of the proceeds from the token sale in marketing measures and campaigns to raise awareness of the CCTOK.

The worse the global threat situation becomes, the more the CCTOK will establish itself as a crisis currency, and demand will increase.

Due to the limited number of tokens, there is a supply shortage, and the sharp rise in demand meets a constant number of tokens.

INCENTIVE SYSTEM FOR MANAGEMENT

Each management board member receives 1 million CCTOK as remuneration for their ongoing activities. These tokens are blocked for three years and may not be sold. This gives the management a high monetary incentive to sustain the CCTOK and implement measures to increase the share price.

GCI — GLOBAL CRISIS INDEX

CONTENT STRUCTURE

The specially developed regression model known as the GCI — Global Crisis Index serves as an indicator for assessing the development of the global crisis. The GCI is calculated from published key figures and reports from internationally renowned institutions. The various key figures are weighted and condensed into the overall GCI figure. This makes it possible to derive a trend for global crisis development, identify the contribution of each individual crisis category, and compare it with the previous period.

Current sources:

- (1) World Population Dashboard — United Nations Population Fund (UNO)
- (2) Global Risk Report — World Economic Forum
- (3) Climate Reports — United Nations
- (4) Global Report — UNHCR
- (5) Global Conflict Tracker — Council on Foreign Relations
- (6) Poverty Reports — Statista
- (7) Global Economic Outlook — Capital Economics
- (8) World Health Statistics — WHO

Extensions can be made, especially if new crises arise or additional sources prove high quality.

EXCURSUS ON REGRESSION ANALYSIS: (Wikipedia)

Regression analysis is a set of statistical analysis techniques that aim to model relationships between a dependent (variable (also called an explained variable, predicted variable, response variable, or regressand) and one or more independent variables (also called an explanatory variable, predictor[variable], control variable or regressor). Regressions are used to describe relationships quantitatively or to predict values of the dependent variable.

TOKEN SALE AND CAPITAL UTILIZATION

General Terms Token Sale	
Presale	10,000,000
Remuneration Management	3,000,000
Total number of tokens	13,000,000

Issuer	Asgard Group LLC
Listing price	1 USD
Issue proceeds	10,000,000 USD
Abbreviation	CCTOK
Fiat currencies accepted	USD, EUR
Cryptocurrencies accepted	USTD, BTC, ETH

The token will be strictly limited and non-inflationary, and no additional token will be minted at any point. All unsold tokens will be kept as liquidity for the company. All company-held tokens will be subject to a vesting period of 12 months and can be released afterward.

UTILIZATION OF CAPITAL

The proceeds from the token sale will be used in marketing measures to increase awareness of the GCI an CCTOK crisis currency and business developemt to cover running costs (external consultants, fees, website, taxes).

The aim is to invest the capital raised profitably in marketing campaigns to increase awareness, achieve technically flawless processing, and build a stable company/team.

MEDIA COVERAGE AND MARKETING CAMPAIGNS

The Crisis Currency Token (CCTOK) will increase in value as a direct response to the intensity of global crises. Our annual GCI (Global Crisis Index) reports summarize all global index figures and thus provide a comprehensive and meaningful overview of the world's crises.

Increase in the value of CCTOK through media coverage of the GCI report

The GCI report is used on television, the Internet and in newspapers as a reliable source to analyze the current crisis situation. The broad media coverage and use of the GCI report as a reference increases the awareness and visibility of the CCTOK.

Meaningfulness of the GCI report

Our GCI report is unique because it integrates a variety of global crisis indicators and offers a precise assessment of the current global crisis situation. This comprehensive methodology makes the GCI an indispensable tool for the media, politics and the public.

Connection between GCI and CCTOK

The more crises there are, the more often the GCI report is mentioned in the media. This increased media presence leads to increased demand for the CCTOK, as investors see the token as a hedge against increasing uncertainty. More media presence means more demand and thus a higher trading price for the CCTOK.

Step-by-step implementation

To successfully implement this strategy, we plan the following measures:

- Annual publication of the GCI report: A detailed, scientifically based report that comprehensively analyzes and evaluates global crises.
- Regular blog posts and updates: Ongoing analyses and updates on specific crises and developments.
- Targeted media work: Press releases, interviews and collaborations with leading media houses to maximize the distribution of the GCI report.
- Exclusive benefits for token holders: Early access to reports, special analyses and participation in panel discussions.

Long-term impact

Through continuous media presence and the clear connection between the intensity of global crises and the GCI report, the CCTOK will be established as an indispensable tool for crisis management and hedging. This leads to a stable and growing demand for the token in the long term.

Invest in CCTOK to not only benefit from the increase in value in times of crisis, but also to contribute to overcoming global crises.

COMPANY STRUCTURE AND TEAM

The issuer is the Asgard Group LLC., which is based in Georgia. Georgia ranks 35th on the Economic Freedom Index in 2023. Georgia has a high level of legal certainty, a stable economic system, and attractive tax conditions for IT developments.

In Norse mythology, Asgard stands for a castle in which the gods are protected by impregnable walls. This castle is made of gold and precious stones, and Odin can observe the new world from there. Asgard should be understood as a synonym for the CCTOK community, which protects itself and builds enormous prosperity.

Niko A. Schöler
CEO

Niko is the mastermind and visionary behind CCTOK. Niko has over 15 years of experience in the financial industry, management consulting, and business development. Niko has held several management and leadership roles and has successfully built various business units and projects.

Achim Sedelmaier
CTO

Achim has many years of experience as a programmer for large and well-known projects. He is also a recognized website developer and designer. Achim manages the technical implementation of the project.

Benedikt L. Brunnmayr
CMO

Benni has many years of experience in marketing and is the managing director of his advertising agency. He is responsible for the management and implementation of marketing activities at CCTOK.

Henrike Hohenecker
COO

Henni has over 20 years of management experience in banking, real estate, and office management. Henni is in charge of project and office management and ensures that the operational business runs smoothly.

TECHNICAL IMPLEMENTATION

The CCTOK will be technically developed during the Presale Phase This development will be based on various factors.

- High level of security. The blockchain offers one of the highest levels of security.
- Network stability: The blockchain solutions offers high stability and reliability and provides the ability to process many transactions securely and reliably.
- Compatibility and acceptance:
The network offers the highest level of compatibility with other blockchain solutions and a very high level of acceptance in the cryptocurrency world.

OPPORTUNITIES AND RISKS

Opportunities	Risks
Above-average profits can be achieved with tokens and cryptocurrencies. Especially for buyers who get in at an early stage (cf. bitcoin/early bird effect).	If the global threats are resolved and the overall situation improves, the tokens and the business model will lose value.
CCTOK has a unique and distinctive business model.	All countries ban and prosecute cryptocurrencies, tokens, and blockchains. Ownership would then be illegal, and trading via exchanges would no longer be possible.
Issues such as climate change, migration, wars, and resource scarcity enjoy high media, political, and social attention worldwide. This provides CCTOK's business model with permanent media support.	We recommend that you only invest capital that you are prepared to expose to a high level of risk and that you can easily bear to lose. There is a risk of total loss of the capital invested.
You can protect yourself and your descendants against a deterioration in the global situation.	
As global threats increase, more and more people are looking for a way out. The demand for CCTOK can increase sharply, and the price rises rapidly.	
The tokens can be easily transferred worldwide using a wallet.	
Professional management team with a strong track record and lots of experience.	
A purchase is possible with little capital.	
Low transaction and custody fees.	
Cryptocurrencies are less dependent on central authorities such as governments or banks. They can be more easily protected against state intervention or expropriation.
